

VISUAL FIELD SCREENING:

The visual field analyzer can detect diseases such as pituitary tumors, glaucoma, retinal and macular degeneration, optic nerve disease, and retinal disturbances due to vascular problems and medications.

We strongly recommend that all our patients over the age of 30 receive this evaluation. It is especially important for those patients who have a history of high blood pressure, diabetes, headaches, migraines, floaters, a high spectacle prescription, retinal problems, or have a family member who suffers from glaucoma or retinal problems.

*This state of the art procedure requires an additional 15 minutes of your time and there is a nominal fee of **\$20.00**.*

RETINAL PHOTOGRAPHY:

*A new highly sophisticated digital camera now allows us to provide a more thorough analysis and documentation of your eyes. This picture allows us to make comparisons over the years, and can assist the doctor in detecting diabetes, glaucoma, macular degeneration, and many other retinal diseases. If a successful photo is obtained, you do not need to be dilated. **There is a \$30 charge for this procedure.***

If you have a medical diagnosis and we accept your medical insurance, we will bill for this procedure and you will not be responsible to pay for it.

I WOULD LIKE THE VISUAL FIELD SCREENING

I WOULD LIKE TO HAVE THE RETINAL PHOTO TAKEN TODAY

I DECLINE BOTH OF THESE PROCEDURES
